## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/08/2008 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 13-16, 20 and 22-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Callan et al. (US 2003/0132038).

fork lift truck (Fig. 4) comprising:

a truck body (11),

a lift mechanism (12) connected to the truck body by means of a vertically extending

pivot (18) and means (17) for turning the lift mechanism relative to the truck body about said pivot,

a pair of undriven rear ground engaging wheels (24, 26; ¶ 0028, ln. 10-14 state that the wheels may be undriven) mounted on transverse axes,

the lifting mechanism having a single ground engaging front wheel (23) mounted centrally on a transverse axis, wherein the front wheel has independent drive means (¶ 0023).

The lifting mechanism is pivoted at an angle of substantially 90 degrees (Fig. 3).

The front wheel is positioned forwardly of the pivot connection (Fig. 4) and positioned as far forward as possible towards the load bearing part of the lifting mechanism.

The driven wheel is driven by an electric or hydraulic motor (¶ 0022, ln. 6), connected to the wheel (¶ 0022, ln. 4-7)

Power is provided to the motor by an internal combustion engine (¶ 0018, ln. 13).

#### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Callan in view of Hagin et al (US 4,778,020). Callan discloses as discussed above, but does not directly disclose a gearbox. Hagin discloses a gearbox (3) connecting the motor to the

wheels. Therefore, it would have been obvious to a person having ordinary skill in the art at the time of the invention to modify Callan as taught by Hagin in order to provide a well-known means of power transfer between the motor and wheel (¶ 0010 of Callan explains that the wheels can be driven by a differential unit).

### ***Response to Arguments***

6. Applicant's arguments filed 10/30/08 have been fully considered but they are not persuasive. The Callan reference reads on amended claim 13, as provided above.
